

Shaping the Future: Insights into 2024's Top Tech Trends

Kassem Kalineh

Dec 14, 2024

OUTLINE

- Executive Summary
- Introduction
- Methodology
- Results
 - Visualization – Charts
 - Dashboard
- Discussion
 - Findings & Implications
- Conclusion
- Appendix

EXECUTIVE SUMMARY

- HTML/CSS, JavaScript, and Python most popular tools and technologies in the industry.
- Java,Sql and python are emerging technologies that respondents are eager to explore in the coming year.
- Most respondents have a bachelor degree or Master degree and the analysis shows that there is relative relationship between education level and technology preferences.

INTRODUCTION

This analysis explores current and emerging trends in tools and technologies based on survey responses from tech professionals. Key findings include:

- Most Popular Technologies:
 - Programming Languages: HTML/CSS, JavaScript, and Python dominate as the most widely used, reflecting their versatility in web development, data analysis, and database interaction.
 - Databases: MySQL, Microsoft SQL Server, and PostgreSQL are the most commonly used, with PostgreSQL gaining traction for scalable solutions.
 - Platforms: Windows and Linux are the top choices, highlighting the community's reliance on open-source and containerization technologies.

METHODOLOGY

- Data collection sources
 - Web scraping
 - API's
- Data wrangling
 - Clean Data
 - Normalization/Standardization:
- Exploratory data analysis
 - Analyzing Data distribution
 - Handling outliers
 - Correlation Analysis
- Data Visualization

RESULTS

The analysis reveals the following key results:

- **Current Favorites:**

- Programming Languages: HTML/CSS, JavaScript and Python are the most widely used, with SQL as a critical skill for database interaction.
- Databases: MySQL is the most commonly used, but PostgreSQL and MongoDB are significant contenders.
- Platforms: Linux and Docker dominate current adoption, underscoring the trend toward open-source tools and containerization.

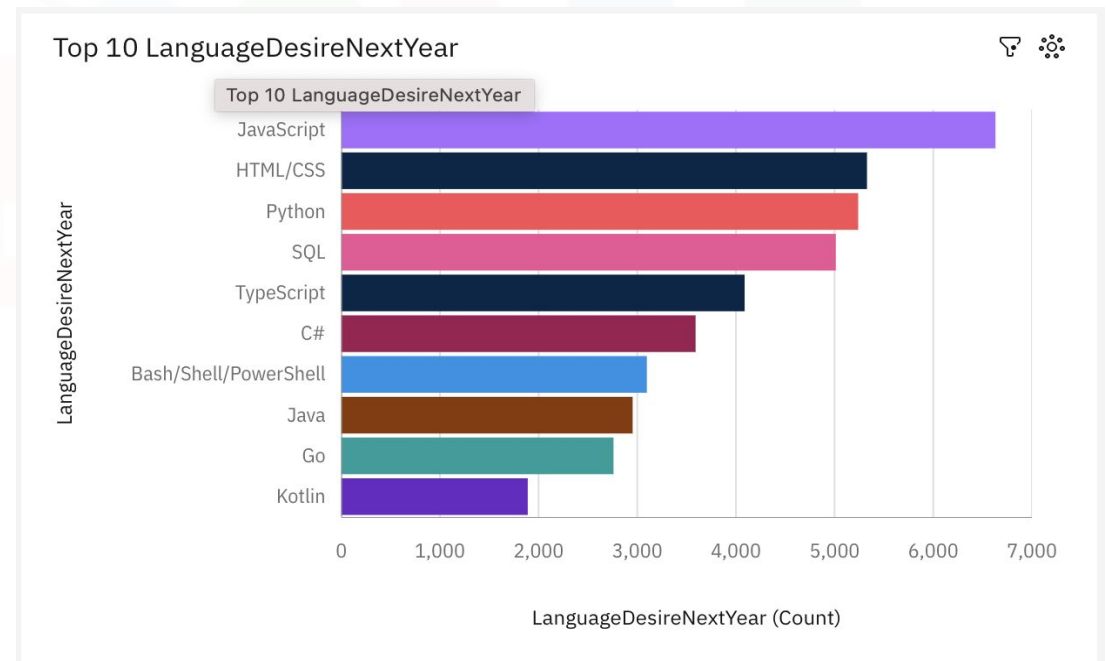

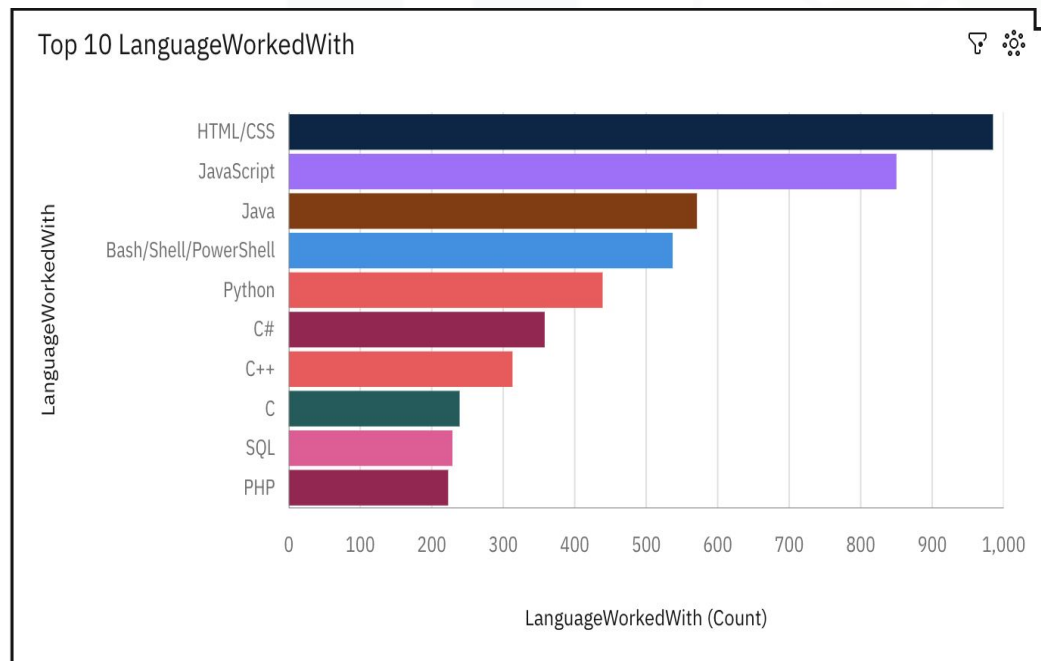

- **Emerging Trends:**

- Programming Languages: Interest in Go and Kotlin reflects their growing importance in cloud-native and mobile development.
- Databases: PostgreSQL has become the most desired database, showcasing its popularity for modern scalable applications.

PROGRAMMING LANGUAGE TRENDS

Current
Year

Next
Year

PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

Findings

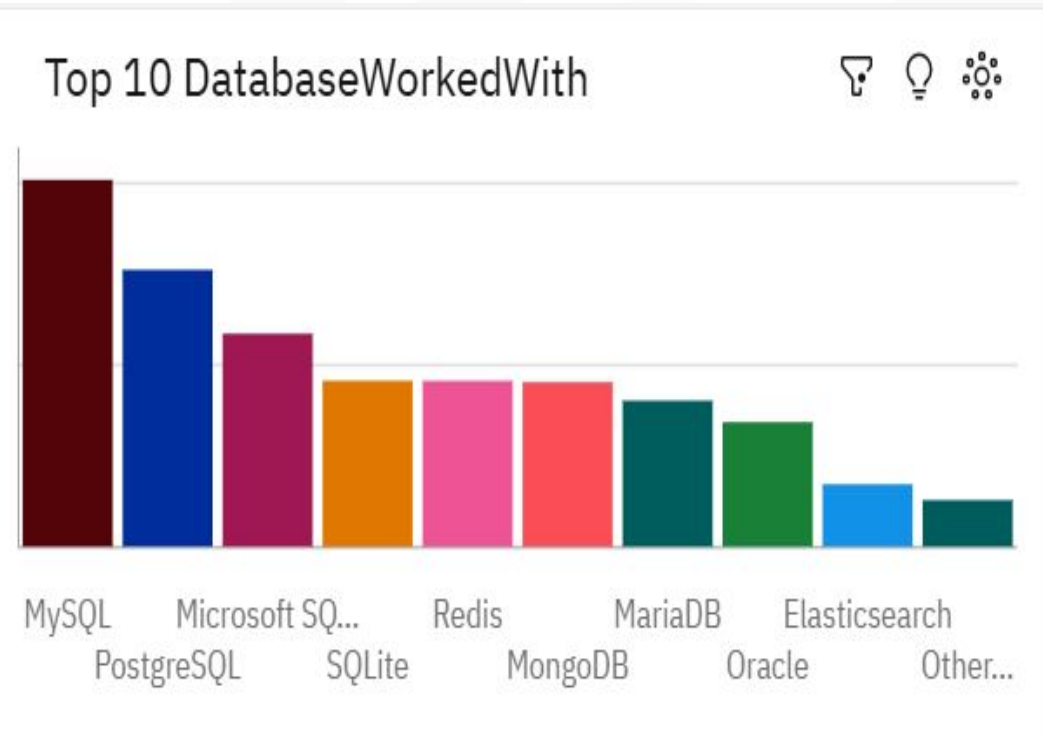

- HTML/CSS seems to keep as the leading language.
- Java is fast growing language.
- There is a great interest in python

Implications

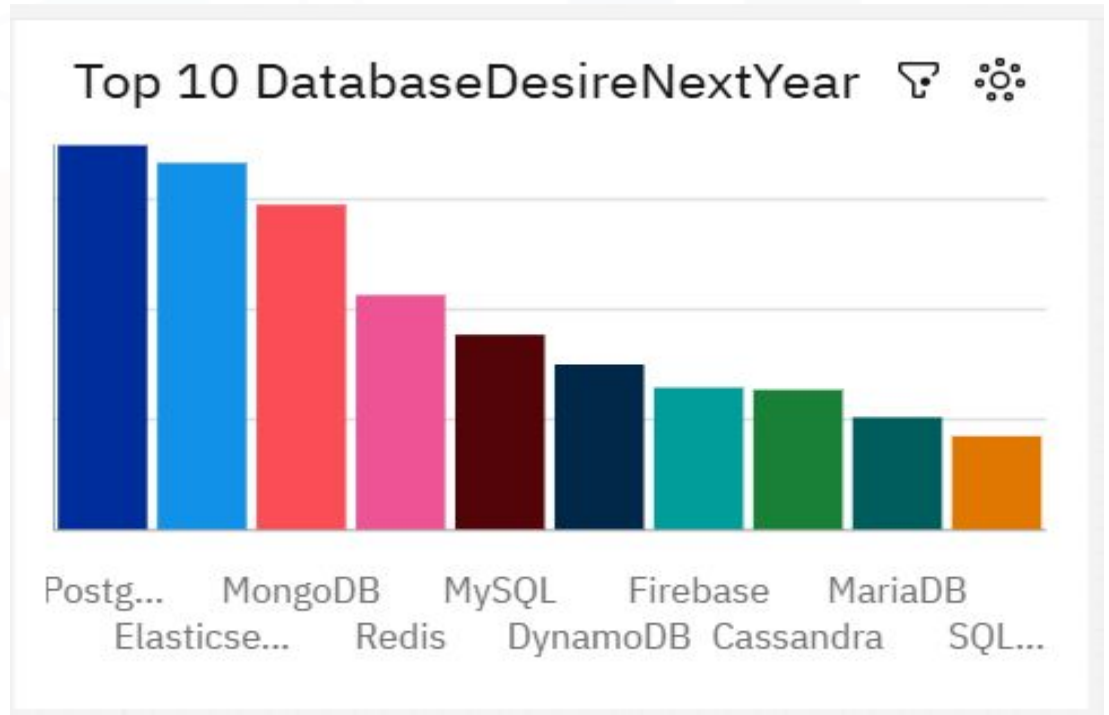

- Possible developers to migrate from html/css to java.

DATABASE TRENDS

Current Year

Next Year

DATABASE TRENDS - FINDINGS & IMPLICATIONS

Findings

- Sql is a most used database.
- Lack of interest in MariaDb and Oracle.
- Increasing interest in Microsoft Sql and Sqlite.

Implications

- MariaDb and Oracle is losing ground in the market.
- Microsoft Sql and Sqlite are getting base in the market.

DASHBOARD

DISCUSSION

The analysis conducted throughout this project focused on understanding technology usage, trends, and demographic data through the collection, wrangling, exploration, and visualization of survey data.

OVERALL FINDINGS & IMPLICATIONS

Findings

- HTML/CSS is widely used and Java is getting popular.
- Over 90% developers are male.

Implications

- Female are less interested in technology trends.

CONCLUSION

Programming Languages:

- Htm/css, JavaScript, and Java lead as the most widely used and desired languages.

Databases:

- PostgreSQL emerges as the most desired database, overtaking MySQL, showcasing its rising popularity in scalable and flexible systems.

Platforms:

- Window and Linux dominate both current use and future aspirations, emphasizing the trend toward containerization and open-source systems.
